Organization: **Talosec**

Project: **Enterprise SOC Virtual Lab**

Intern Name: **ALI RAYYAN**

Mentor: **Sir Nasradin**

Duration: **Month 2 of Internship**

Date: **27-01-2026**

1. EXECUTIVE SUMMARY

This document provides a comprehensive overview of the Enterprise SOC Virtual Lab implementation completed during Month 2 of the cybersecurity internship at Talosec. The lab simulates a real enterprise environment designed for Security Operations Center (SOC) training, blue team operations, and network security architecture practice.

The lab environment includes:

- FortiGate firewall for network security and traffic control
- Windows Active Directory infrastructure for centralized authentication
- Windows workstation joined to the domain
- Ubuntu application server for internal services
- Wazuh SIEM for centralized security monitoring and log analysis

This project builds upon Month 1 activities which included Wazuh SIEM deployment, log analysis, custom detection rule creation, active response configuration, and honeypot investigation.

2. PROJECT OBJECTIVES

The primary objectives of this lab implementation were:

1. Build and understand enterprise network segmentation
2. Deploy and configure FortiGate firewall architecture
3. Implement centralized authentication using Active Directory
4. Enable endpoint and server monitoring
5. Operate a SOC using Wazuh SIEM
6. Practice blue team detection, logging, and alerting
7. Understand trust boundaries and attack surfaces

Roles Assumed During Implementation:

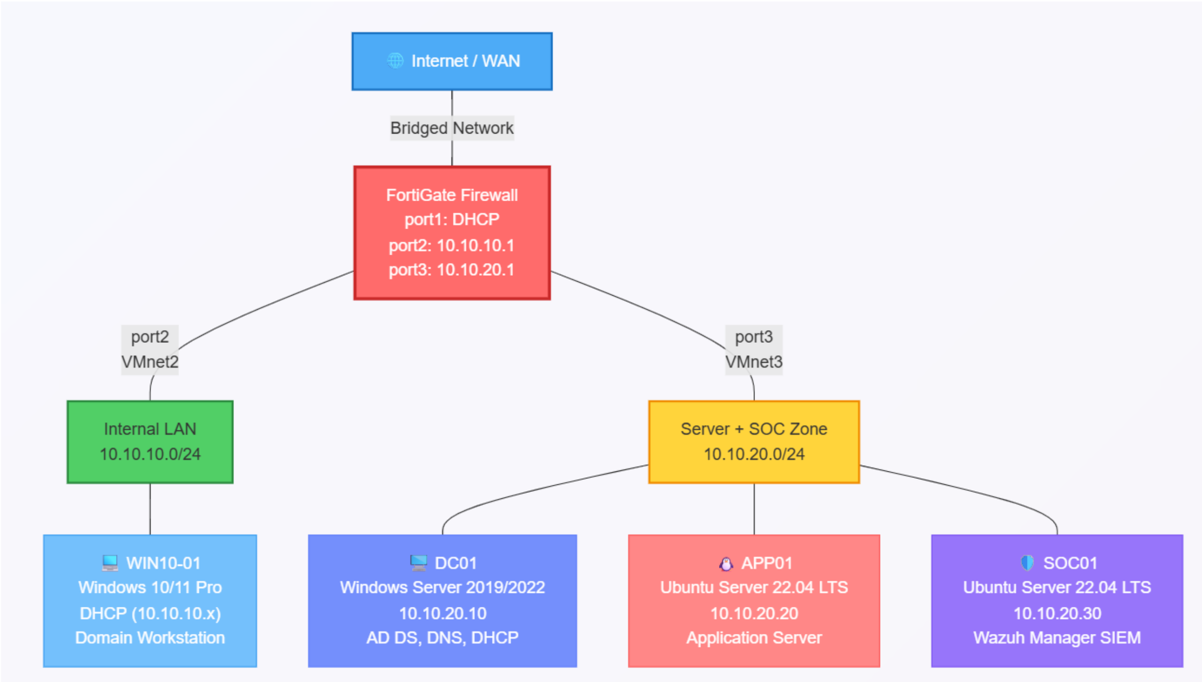
- Senior Network Architect
- Virtualization Engineer
- SOC Architect
- Cybersecurity Lab Designer

3. LAB ARCHITECTURE OVERVIEW

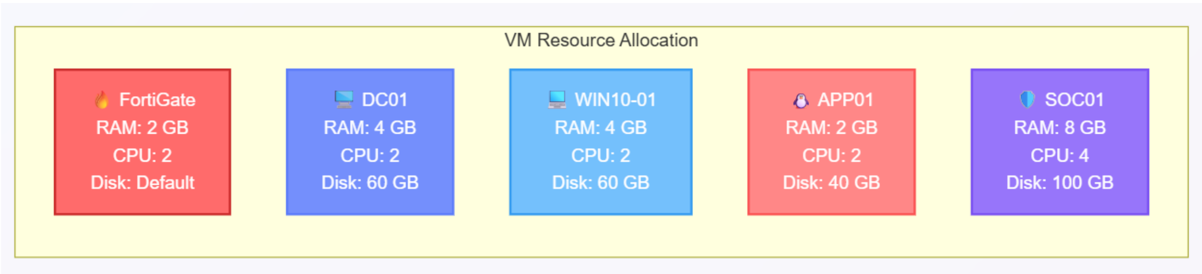
The lab environment was built using VMware Workstation as the virtualization platform. The architecture consists of three security zones separated by a FortiGate firewall, with Wazuh SIEM providing centralized monitoring.

4. NETWORK DESIGN

4.1 Network Topology Diagram



5. VM Resource Allocation:



6. IMPLEMENTATION STEPS

6.1 VMware Network Configuration

Step 1: Opened VMware Workstation and navigated to Edit → Virtual Network Editor

Step 2: Clicked "Change Settings" to run as Administrator

Step 3: Created the following virtual networks:

VMnet0 (Bridged):

• Type: Bridged

• Bridged to: WiFi Adapter

• Purpose: WAN/Internet connectivity for FortiGate

VMnet2 (Host-only):

• Type: Host-only

• Subnet: 10.10.10.0

• Subnet Mask: 255.255.255.0

• DHCP: Disabled

• Purpose: Internal LAN network

VMnet3 (Host-only):

• Type: Host-only

• Subnet: 10.10.20.0

• Subnet Mask: 255.255.255.0

• DHCP: Disabled

• Purpose: Server + SOC network

Step 4: Applied configuration and closed Virtual Network Editon

6.2 FortiGate Firewall Setup

Step 1: Imported FortiGate VM into VMware Workstation

Step 2: Configured VM hardware settings:

• Memory: 2 GB

• Processors: 2

• Network Adapter 1: VMnet0 (Bridged) - WAN

• Network Adapter 2: VMnet2 - Internal LAN

• Network Adapter 3: VMnet3 - Server + SOC

Step 3: Powered on FortiGate VM and waited for boot completion

Step 4: Logged in with default credentials:

• Username: admin

• Password: (blank)

Step 5: Set new admin password when prompted

Step 6: Configured network interfaces via CLI:

Port 1 (WAN):

- config system interface
- edit port1
- set mode dhcp
- set allowaccess ping https ssh http fgfm
- set alias "WAN"
- set role wan
- next
- end

Port 2 (Internal LAN):

- config system interface
- edit port2
- set mode static
- set ip 10.10.10.1 255.255.255.0

- set allowaccess ping https ssh http
- set alias "Internal-LAN"
- set role lan
- next
- end

Port 3 (Server + SOC):

- config system interface
- edit port3
- set mode static
- set ip 10.10.20.1 255.255.255.0
- set allowaccess ping https ssh http
- set alias "Server-SOC-Network"
- set role lan
- next
- end

Step 7: Configured DNS:

- config system dns
- set primary 8.8.8.8
- set secondary 8.8.4.4
- end

Step 8: Verified interface configuration:

- get system interface physical

Step 9: Configured DHCP server for Internal LAN:

- config system dhcp server
- edit 1
- set interface "port2"
- set default-gateway 10.10.10.1

- set netmask 255.255.255.0
- set dns-server1 10.10.20.10
- set dns-server2 8.8.8.8
- config ip-range
- edit 1
- set start-ip 10.10.10.100
- set end-ip 10.10.10.200
- next
- end
- next
- end

Step 10: Tested internet connectivity:

- execute ping 8.8.8.8
- execute ping google.com
- Step 11: Configured Syslog to forward logs to Wazuh:

- config log syslogd setting
- set status enable
- set server "10.10.20.30"
- set port 514
- set facility local7
- set format default
- set mode udp
- end

- config log syslogd filter
- set severity information
- set forward-traffic enable
- set local-traffic enable
- set anomaly enable
- end

Step 12: Accessed FortiGate GUI via browser:

- URL: https://[FortiGate-WAN-IP]
- Username: admin
- Password: [configured password]

6.3 Windows Server (DC01) Setup

Step 1: Created new VM in VMware:

• Name: DC01

• Guest OS: Windows Server 2019/2022

• Memory: 4 GB

• Processors: 2

• Disk: 60 GB

• Network: VMnet3

Step 2: Attached Windows Server ISO and started installation

Step 3: Selected "Windows Server 2019/2022 Standard (Desktop Experience)"

Step 4: Completed installation and set Administrator password: Talosec@2024!

Step 5: Configured static IP address:

• IP Address: 10.10.20.10

• Subnet Mask: 255.255.255.0

• Default Gateway: 10.10.20.1

• Preferred DNS: 127.0.0.1

• Alternate DNS: 8.8.8.8

Step 6: Tested network connectivity:

- ping 10.10.20.1
- ping 8.8.8.8

Step 7: Renamed server using PowerShell:

- Rename-Computer -NewName "DC01" -Restart

Step 8: After restart, installed Active Directory Domain Services:

- Install-WindowsFeature -Name AD-Domain-Services -IncludeManagementTools

Step 9: Promoted server to Domain Controller:

- Install-ADDSForest `
- -DomainName "talosec.local" `
- -DomainNetbiosName "TALOSEC" `
- -InstallDns:$true `
- -SafeModeAdministratorPassword (ConvertTo-SecureString "Talosec@Recovery1!" -AsPlainText -Force) `
- -Force:$true
- Server restarted automatically.

Step 10: After restart, verified AD installation:

- Get-ADDomain
- Get-ADForest
- Get-ADDomainController

Step 11: Configured DNS forwarders:

- Add-DnsServerForwarder -IPAddress "8.8.8.8"
- Add-DnsServerForwarder -IPAddress "8.8.4.4"

Step 12: Created Organizational Units:

- New-ADOrganizationalUnit -Name "Talosec-Users" -Path "DC=talosec,DC=local"
- New-ADOrganizationalUnit -Name "Talosec-Computers" -Path "DC=talosec,DC=local"
- New-ADOrganizationalUnit -Name "Talosec-Servers" -Path "DC=talosec,DC=local"

Step 13: Created test users:

 # Regular User 1

- New-ADUser -Name "John Smith" `
- -GivenName "John" `
- -Surname "Smith" `
- -SamAccountName "jsmith" `
- -UserPrincipalName "jsmith@talosec.local" `
- -Path "OU=Talosec-Users,DC=talosec,DC=local" `
- -AccountPassword (ConvertTo-SecureString "User@123" -AsPlainText -Force) `
- -PasswordNeverExpires $true `
- -Enabled $true

 # Regular User 2

- New-ADUser -Name "Jane Doe" `
- -GivenName "Jane" `
- -Surname "Doe" `
- -SamAccountName "jdoe" `
- -UserPrincipalName "jdoe@talosec.local" `
- -Path "OU=Talosec-Users,DC=talosec,DC=local" `
- -AccountPassword (ConvertTo-SecureString "User@123" -AsPlainText -Force) `
- -PasswordNeverExpires $true `
- -Enabled $true

 # SOC Admin User

- New-ADUser -Name "SOC Admin" `
- -GivenName "SOC" `

- -Surname "Admin" `
- -SamAccountName "socadmin" `
- -UserPrincipalName "socadmin@talosec.local" `
- -Path "OU=Talosec-Users,DC=talosec,DC=local" `
- -AccountPassword (ConvertTo-SecureString "SOCAdmin@123" -AsPlainText -Force) `
- -PasswordNeverExpires $true `
- -Enabled $true

 # Add SOC Admin to Domain Admins

- Add-ADGroupMember -Identity "Domain Admins" -Members "socadmin"

Step 14: Verified users:

- Get-ADUser -Filter * -SearchBase "OU=Talosec-Users,DC=talosec,DC=local" | Select-Object Name, SamAccountName

Step 15: Enabled advanced audit policies:

- **auditpol /set /subcategory:"Logon" /success:enable /failure:enable**
- **auditpol /set /subcategory:"Logoff" /success:enable**
- **auditpol /set /subcategory:"Account Lockout" /failure:enable**
- **auditpol /set /subcategory:"Special Logon" /success:enable**
- **auditpol /set /subcategory:"User Account Management" /success:enable /failure:enable**
- **auditpol /set /subcategory:"Security Group Management" /success:enable**
- **auditpol** /set /subcategory:"Process Creation" /success:enable

Step 16: Created snapshot - "DC01-AD-Complete"

6.4 Windows 10/11 Workstation (WIN10-01) Setup

Step 1: Created new VM in VMware:

• Name: WIN10-01

• Guest OS: Windows 10/11 x64

• Memory: 4 GB

• Processors: 2

• Disk: 60 GB

• Network: VMnet2

Step 2: Attached Windows 10/11 Pro ISO and started installation

Step 3: Completed installation with local account:

• Username: localadmin

• Password: Talosec@2024

Step 4: Verified DHCP IP assignment:

- **ipconfig /all**

Expected output:

• IPv4 Address: 10.10.10.100 (or similar from DHCP range)

• Subnet Mask: 255.255.255.0

• Default Gateway: 10.10.10.1

• DNS Server: 10.10.20.10

Step 5: Tested network connectivity:

ping 10.10.10.1

ping 10.10.20.10

ping 8.8.8.8

nslookup talosec.local

Step 6: Joined domain using PowerShell (Administrator):

- Add-Computer -DomainName "talosec.local" -Credential TALOSEC\Administrator -Restart
- Entered password: Talosec@2024!

Step 7: After restart, tested domain login:

• Username: TALOSEC\jsmith

• Password: User@123

Login successful.

Step 8: Installed Sysmon for enhanced logging:

 # Created Sysmon folder

- New-Item -Path "C:\Sysmon" -ItemType Directory -Force

 # Downloaded Sysmon

- Invoke-WebRequest -Uri "https://download.sysinternals.com/files/Sysmon.zip" -OutFile "C:\Sysmon\Sysmon.zip"

 # Extracted files

- Expand-Archive -Path "C:\Sysmon\Sysmon.zip" -DestinationPath "C:\Sysmon" -Force

 # Downloaded SwiftOnSecurity config

- **Invoke-WebRequest -Uri "https://raw.githubusercontent.com/SwiftOnSecurity/sysmon-config/master/sysmonconfig-export.xml" -OutFile "C:\Sysmon\sysmonconfig.xml"**

 # Installed Sysmon with config

- C:\Sysmon\Sysmon64.exe -accepteula -i C:\Sysmon\sysmonconfig.xml

Step 9: Verified Sysmon running:

- Get-Service Sysmon64

6.5 Ubuntu Application Server (APP01) Setup

Step 1: Created new VM in VMware:

• Name: APP01

• Guest OS: Ubuntu 64-bit

• Memory: 2 GB

• Processors: 2

• Disk: 40 GB

• Network: VMnet3

Step 2: Attached Ubuntu Server 22.04 LTS ISO and started installation

Step 3: Completed installation:

• Server name: APP01

• Username: sysadmin

• Password: Talosec@2024

• Enabled OpenSSH server during installation

Step 4: Logged in and configured static IP:

- sudo nano /etc/netplan/00-installer-config.yaml

Content:

```
network:
  version: 2
  renderer: networkd
  ethernets:
    ens33:
      addresses:
        - 10.10.20.20/24
      routes:
        - to: default
          via: 10.10.20.1
```

```
    nameservers:
      addresses:
        - 10.10.20.10
        - 8.8.8.8
      search:
        - talosec.local
```

Step 5: Applied network configuration:

- sudo netplan apply

Step 6: Verified network configuration:

- ip addr show
- ping 10.10.20.1
- ping 8.8.8.8

Step 7: Set hostname:

- sudo hostnamectl set-hostname APP01

Step 8: Updated system:

- sudo apt update && sudo apt upgrade -y

Step 9: Installed Apache web server:

- **sudo apt install apache2 -y**
- **sudo systemctl enable apache2**
- **sudo** systemctl start apache2

Step 10: Created test web page:

```
sudo bash -c 'cat > /var/www/html/index.html << EOF
<!DOCTYPE html>
<html>
<head>
   <title>Talosec Internal Server</title>
</head>
<body>
   <h1>Welcome to Talosec Internal Application Server</h1>
   <p>Server: APP01</p>
   <p>IP: 10.10.20.20</p>
</body>
</html>
EOF'
```

Step 11: Verified Apache running:

- sudo systemctl status apache2
- curl http://localhost

Step 12: Installed audit daemon:

- sudo apt install auditd audispd-plugins -y
- sudo systemctl enable auditd
- sudo systemctl start auditd

Step 13: Created snapshot - "APP01-Configured"

6.6 Wazuh Manager (SOC01) Setup

Step 1: Created new VM in VMware:

- Name: SOC01
- Guest OS: Ubuntu 64-bit
- Memory: 8 GB (Important for Wazuh)
- Processors: 4
- Disk: 100 GB
- Network: VMnet3

Step 2: Attached Ubuntu Server 22.04 LTS ISO and started installation

Step 3: Completed installation:

- Server name: SOC01
- Username: socadmin
- Password: Talosec@2024
- Enabled OpenSSH server during installation

Step 4: Logged in and configured static IP:

```
sudo nano /etc/netplan/00-installer-config.yaml
```

Content:

```
network:
  version: 2
  renderer: networkd
  ethernets:
    ens33:
      addresses:
        - 10.10.20.30/24
```

```
  routes:
    - to: default
      via: 10.10.20.1
  nameservers:
    addresses:
      - 10.10.20.10
      - 8.8.8.8
    search:
      - talosec.local
```

Step 5: Applied network configuration:

sudo netplan apply

Step 6: Verified connectivity:

- ip addr show
- ping 10.10.20.1
- ping 10.10.20.10
- ping 8.8.8.8

Step 7: Set hostname:

- sudo hostnamectl set-hostname SOC01

Step 8: Updated system:

sudo apt update && sudo apt upgrade -y

Step 9: Installed Wazuh (All-in-One installation):

- curl -sO https://packages.wazuh.com/4.7/wazuh-install.sh
- sudo bash wazuh-install.sh -a

Installation took approximately 15-20 minutes.

Step 10: Saved admin password displayed at end of installation

Note: Password was saved from installation output for dashboard access.

Step 11: Verified Wazuh services:

- sudo systemctl status wazuh-manager
- sudo systemctl status wazuh-indexer
- sudo systemctl status wazuh-dashboard

All three services showed "active (running)" status.

Step 12: Accessed Wazuh Dashboard:

URL: https://10.10.20.30

Username: admin

Password: [password from installation]

Accepted certificate warning and logged in successfully.

Step 13: Configured Wazuh to receive syslog from FortiGate:

sudo nano /var/ossec/etc/ossec.conf

Added the following within <ossec_config>:

```
<remote>
  <connection>syslog</connection>
  <port>514</port>
  <protocol>udp</protocol>
  <allowed-ips>10.10.20.1</allowed-ips>
</remote>
```

Step 14: Restarted Wazuh Manager:

```
sudo systemctl restart wazuh-manager
```

6.7 Wazuh Agent Deployment

6.7.1 Agent on DC01 (Windows Server)

Step 1: In Wazuh Dashboard, navigated to Agents → Deploy new agent

Step 2: Selected:

- Operating System: Windows
- Server address: 10.10.20.30
- Agent name: DC01

Step 3: On DC01, opened PowerShell as Administrator and ran:

```
Invoke-WebRequest -Uri https://packages.wazuh.com/4.x/windows/wazuh-agent-4.7.0-1.msi -OutFile ${env:tmp}\wazuh-agent.msi; msiexec.exe /i ${env:tmp}\wazuh-agent.msi /q WAZUH_MANAGER='10.10.20.30' WAZUH_AGENT_NAME='DC01' WAZUH_REGISTRATION_SERVER='10.10.20.30'
```

Step 4: Started the agent service:

NET START Wazuh

Step 5: Verified agent running:

Get-Service Wazuh

6.7.2 Agent on WIN10-01 (Windows Workstation)

Step 1: On WIN10-01, opened PowerShell as Administrator and ran:

Invoke-WebRequest -Uri https://packages.wazuh.com/4.x/windows/wazuh-agent-4.7.0-1.msi -OutFile ${env:tmp}\wazuh-agent.msi; msiexec.exe /i ${env:tmp}\wazuh-agent.msi /q WAZUH_MANAGER='10.10.20.30' WAZUH_AGENT_NAME='WIN10-01' WAZUH_REGISTRATION_SERVER='10.10.20.30'

Step 2: Started the agent service:

NET START Wazuh

Step 3: Verified agent running:

Get-Service Wazuh

6.7.3 Agent on APP01 (Ubuntu Server)

Step 1: Added Wazuh repository:

curl -s https://packages.wazuh.com/key/GPG-KEY-WAZUH | gpg --no-default-keyring --keyring gnupg-ring:/usr/share/keyrings/wazuh.gpg --import && chmod 644 /usr/share/keyrings/wazuh.gpg echo "deb [signed-by=/usr/share/keyrings/wazuh.gpg] https://packages.wazuh.com/4.x/apt/ stable main" | sudo tee -a /etc/apt/sources.list.d/wazuh.list

sudo apt update

Step 2: Installed agent:

- sudo WAZUH_MANAGER='10.10.20.30' WAZUH_AGENT_NAME='APP01' apt install wazuh-agent -y

Step 3: Enabled and started agent:

- sudo systemctl daemon-reload
- sudo systemctl enable wazuh-agent
- sudo systemctl start wazuh-agent

Step 4: Verified agent running:

- sudo systemctl status wazuh-agent

6.7.4 Verified All Agents in Wazuh Dashboard

Navigated to Wazuh Dashboard → Agents and verified all three agents showing "Active" status:

• DC01 - Active

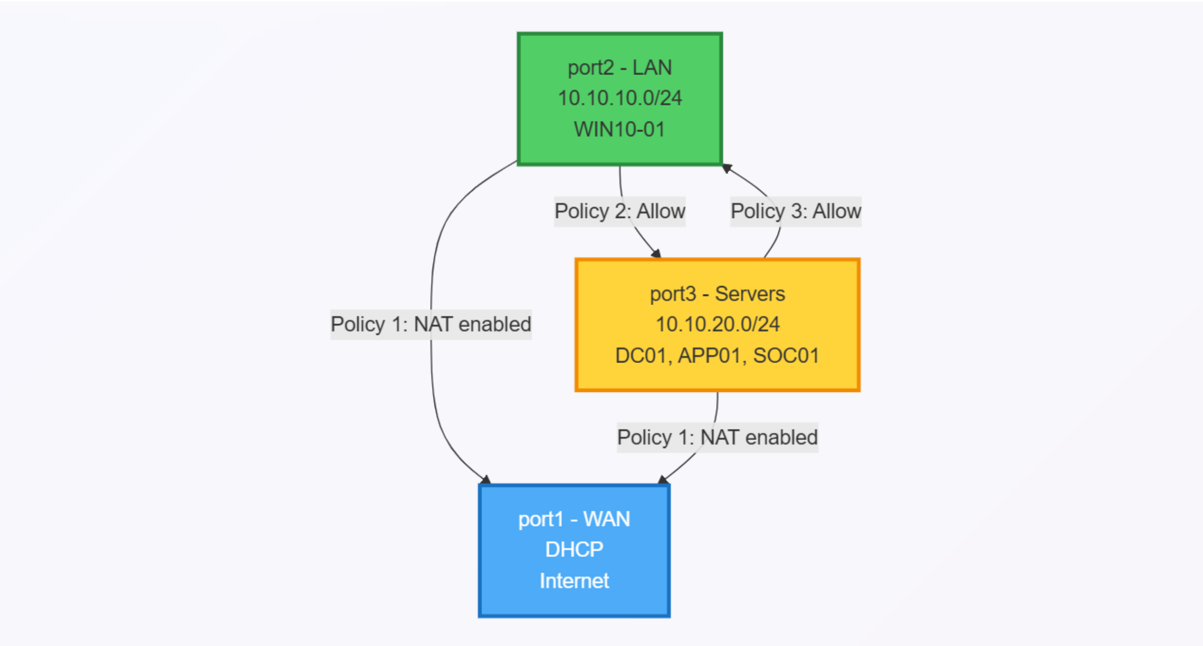
• WIN10-01 - Active

• APP01 - Active

7. FIREWALL POLICIES

Three firewall policies were created on FortiGate to control traffic between zones:

7.1 Policy Summary



7.2 Policy Configurations

Policy 1: All-to-Internet

Purpose: Allows all internal networks to access the internet

- config firewall policy
- edit 1
- set name "All-to-Internet"
- set srcintf "port2" "port3"
- set dstintf "port1"
- set srcaddr "all"
- set dstaddr "all"
- set action accept
- set schedule "always"
- set service "ALL"
- set nat enable
- set logtraffic all
- next

- end

Policy 2: LAN-to-Servers

Purpose: Allows workstations to access servers and SIEM

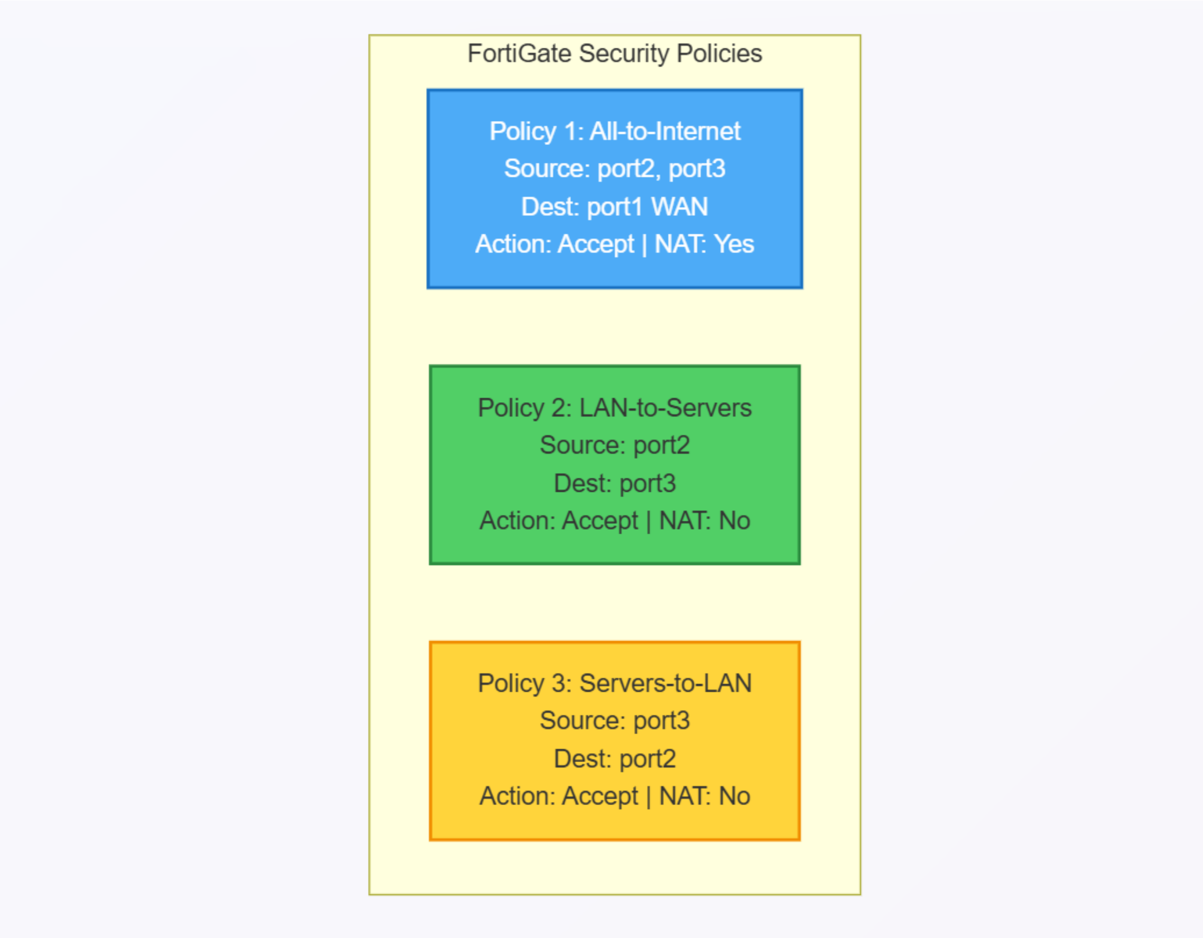
- config firewall policy
- edit 2
- set name "LAN-to-Servers"
- set srcintf "port2"
- set dstintf "port3"
- set srcaddr "all"
- set dstaddr "all"
- set action accept
- set schedule "always"
- set service "ALL"
- set logtraffic all
- next
- end

Policy 3: Servers-to-LAN

Purpose: Allows servers to respond to LAN (required for DHCP, DNS responses)

- config firewall policy
- edit 3
- set name "Servers-to-LAN"
- set srcintf "port3"
- set dstintf "port2"
- set srcaddr "all"
- set dstaddr "all"
- set action accept
- set schedule "always"
- set service "ALL"
- set logtraffic all
- next
- end

7.3 Traffic Flow Diagram



8. TESTING AND VALIDATION

8.1 Network Connectivity Tests

Test 1: WIN10-01 to FortiGate Gateway

Command: ping 10.10.10.1

Result: Success - 4 packets sent, 4 received

Test 2: WIN10-01 to DC01

Command: ping 10.10.20.10

Result: Success - 4 packets sent, 4 received

Test 3: WIN10-01 to Internet

Command: ping 8.8.8.8

Result: Success - 4 packets sent, 4 received

Test 4: WIN10-01 DNS Resolution

Command: nslookup talosec.local

Result: Success - Resolved to 10.10.20.10

Test 5: DC01 to FortiGate Gateway

Command: ping 10.10.20.1

Result: Success - 4 packets sent, 4 received

Test 6: DC01 to Internet

Command: ping 8.8.8.8

Result: Success - 4 packets sent, 4 received

[Screenshot: Connectivity Test Results]

8.2 Security Event Testing

8.2.1 Failed Login Attempts Test

Objective: Generate failed login attempts and verify detection in Wazuh SIEM

Step 1: On WIN10-01, logged out of current session

Step 2: Attempted login with incorrect password:

• Username: TALOSEC\jsmith

• Password: WrongPassword123 (incorrect)

Step 3: Repeated failed login attempt 5 times

Step 4: Verified in Wazuh Dashboard:

• Navigated to Security Events

• Filtered by agent: WIN10-01

• Found alerts for "Authentication failure" (Rule ID: 60122)

Detection Details:

• Rule ID: 60122

• Rule Description: Windows logon failure

• MITRE ATT&CK: T1110 - Brute Force

• Agent: WIN10-01

• Number of Alerts: 5

8.2.2 Successful Login Test

Objective: Verify successful login is logged and visible in Wazuh

Step 1: On WIN10-01, logged in with correct credentials:

• Username: TALOSEC\jsmith

• Password: User@123

Step 2: Login was successful

Step 3: Verified in Wazuh Dashboard:

• Navigated to Security Events

• Filtered by agent: WIN10-01

• Found event for "Successful logon" (Rule ID: 60101)

Detection Details:

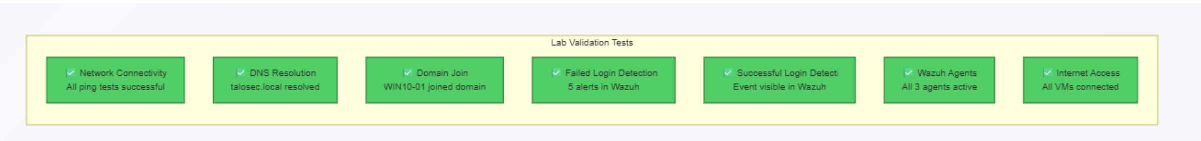
• Rule ID: 60101

• Rule Description: Windows logon success

• Agent: WIN10-01

• Logon Type: Interactive

8.3 Test Summary



9. CONCLUSION

The Enterprise SOC Virtual Lab was successfully implemented, providing a comprehensive environment for cybersecurity training and blue team operations. The lab demonstrates:

Key Accomplishments:

• Successfully deployed multi-zone network architecture with FortiGate firewall

• Implemented Windows Active Directory infrastructure for centralized authentication

• Deployed Wazuh SIEM with agents across all endpoints

• Created and tested firewall policies for traffic control

• Validated security monitoring through failed and successful login detection

• Established end-to-end logging pipeline from endpoints to SIEM

Skills Developed:

• Network segmentation and security zone design

• FortiGate firewall configuration and policy management

• Windows Server administration and Active Directory

• SIEM deployment and agent management

• Security event analysis and investigation

• Virtualization and lab environment design

• Troubleshooting network connectivity issues

This lab provides a solid foundation for:

• SOC Analyst training

• Blue team exercises

• Security architecture understanding

• Incident detection and response practice

The experience gained from building this environment, including troubleshooting various networking and configuration challenges, has significantly enhanced practical cybersecurity skills applicable to real-world enterprise environments.
